INTRODUCING
amazon dash

A Simple Solution for a Forgetful Mind
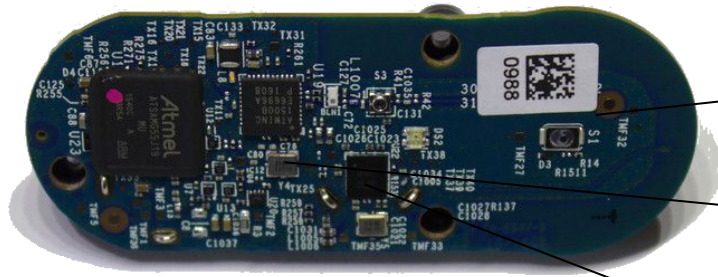

Dylan Tocci

# Physical Components

Button pressed to order product

Adhesive backing to stick to surfaces

Smart Components

Battery powered motherboard

Sends a signal when button is pressed

Components allow the Dash to connect to local internet

Connected Components

When the Dash is pushed, a signal is sent to Amazon to order the product specified by the Dash. In this case, a package of Bounty paper towels would be ordered and shipped.

Functionality

The Dash is able to stick to surfaces, making it very versatile. This allows you to put it in places that remind you of the product you might need. For example, if you might need laundry detergent in the future, you could put a Tide button on your washing machine.
