-

Procedure

1. Use the free iOS/Android mobile apps to setup, check in, watch recaps, and customize settings. Connect as many cameras as you want
2. You can hear and see throughout the room with inbuilt mic and HD camera.
3. You can mount or pivot the camera in a hidden position.
4. Get instant mobile alerts when there's important activity at home, like a door opening, using motion sensors.

Conclusion

The wifi cam can be very helpful for busy parents who cannot be with their children but want to keep control of their kid's activities and monitor their routine. It can also be used to interact with people who cannot walk or move from their room. So they can call anyone at anytime from the in-built mic functionality in the Camera
