

Smart Refrigerator

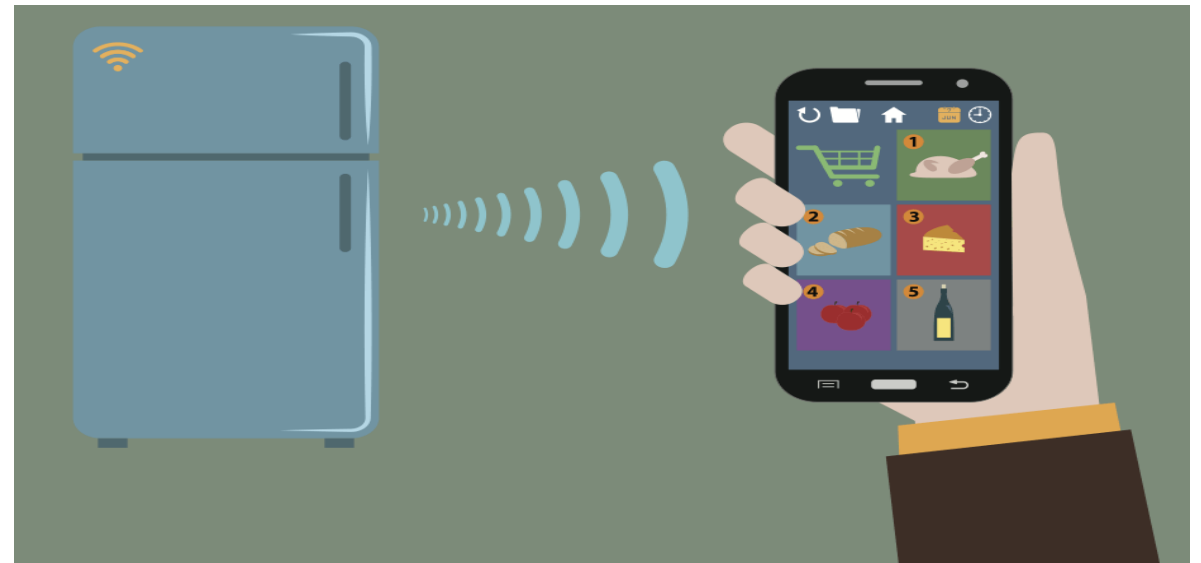

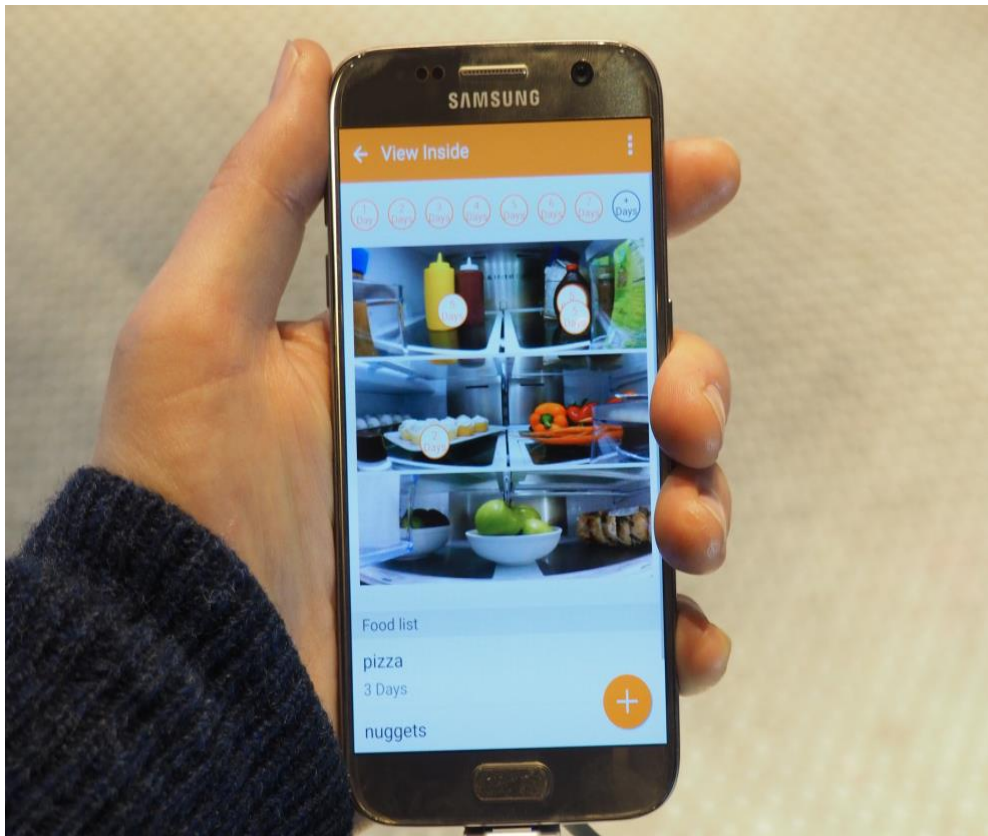

Samsung Family Hub

Home has a new hub

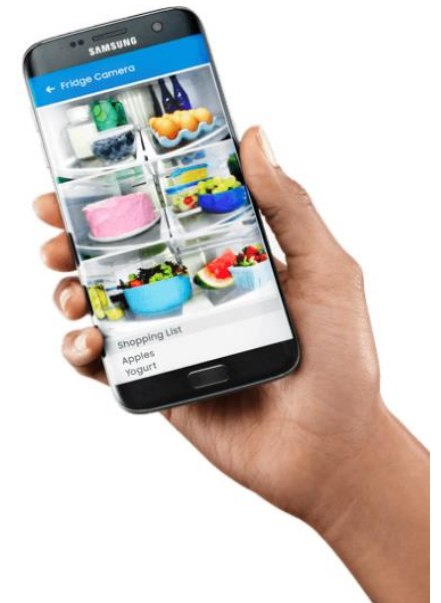

The Family Hub™ is a revolutionary new refrigerator with a Wifi enabled touchscreen that lets you manage your groceries, connect with your family and entertain like never before.

Sujay Premkumar

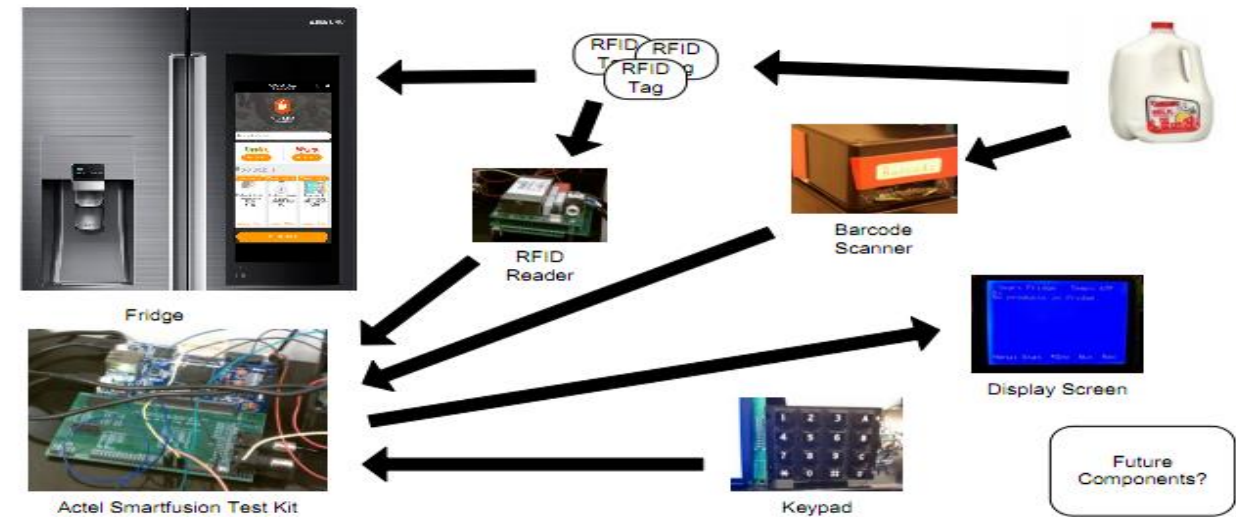

RFID readers in refrigerator can read the items inside and can stream the data to server and to the mobile devices. Server make analysis about the type of item and their expiry date, how stale the food will be in next one day, what's the condition of the food now, what all recipes can be prepared from the items in the fridge. User can get to see the items inside refrigerator using the camera inside the Samsung Hub.

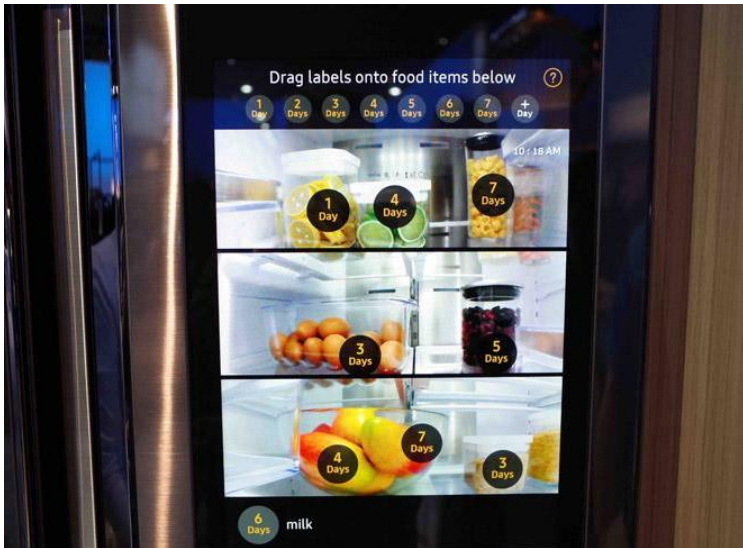

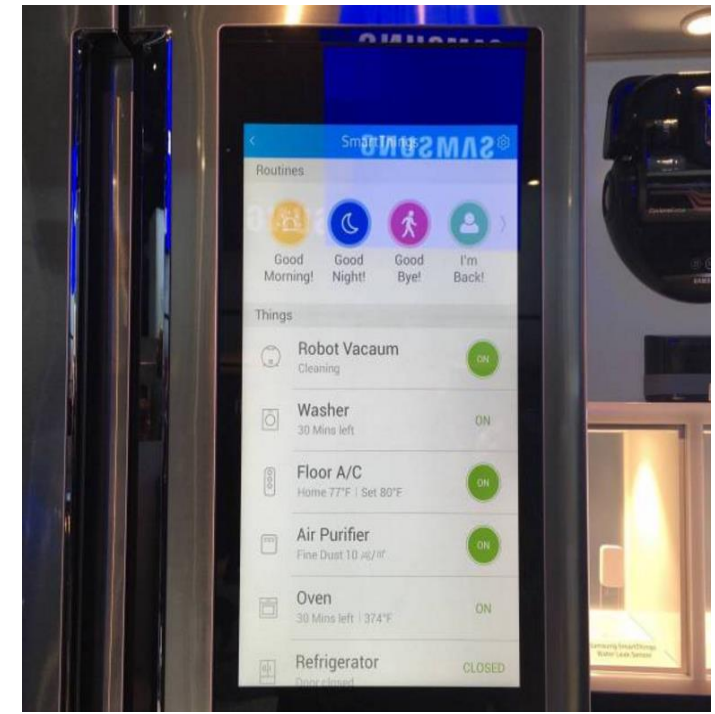

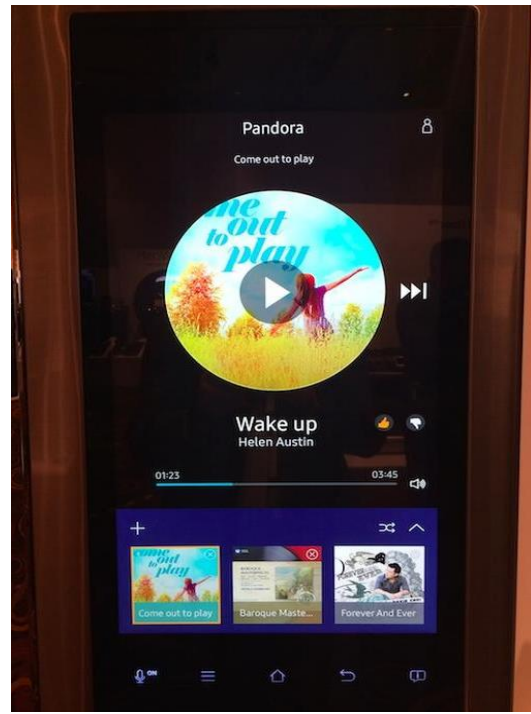

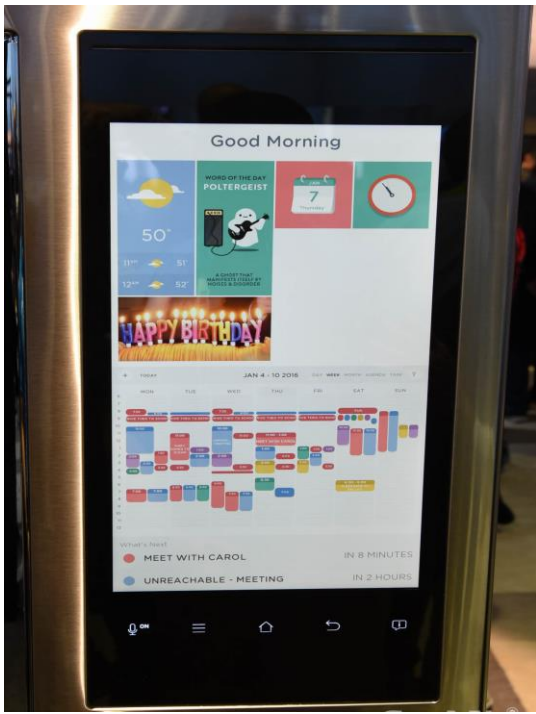

The Smart Refrigerator and EDI

To add some more smartness, it is possible the user can just intimate the reader or an agent in refrigerator just like, “Get all the ingredients for Italian lasagna”. Refrigerator agent can get the cuisine details and match with the items in the refrigerator, and it can order online if something is missing. By the time the user comes home all the ingredients will be arrived in home.

Some of the outstanding IoT connectivity features include controlling and monitoring the other devices in the Home. Family Hub links up with the user calendar and notifies with the day to day schedules. It has huge screen to watch any movies and even for good music. It even can mirror up with the smart phones.
