

POPPY – POUR-OVER

SMART ARTISANAL COFFEE MACHINE

Are you a tech savvy coffee aficionado?

Do you wish you had a coffee machine that did automated pour-overs?

Wish your coffee machine was connected to your smart phone?

Look no further....

Introducing Poppy Pour-Over

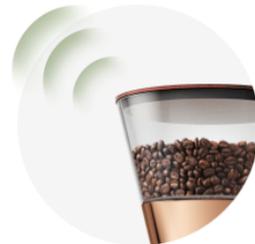

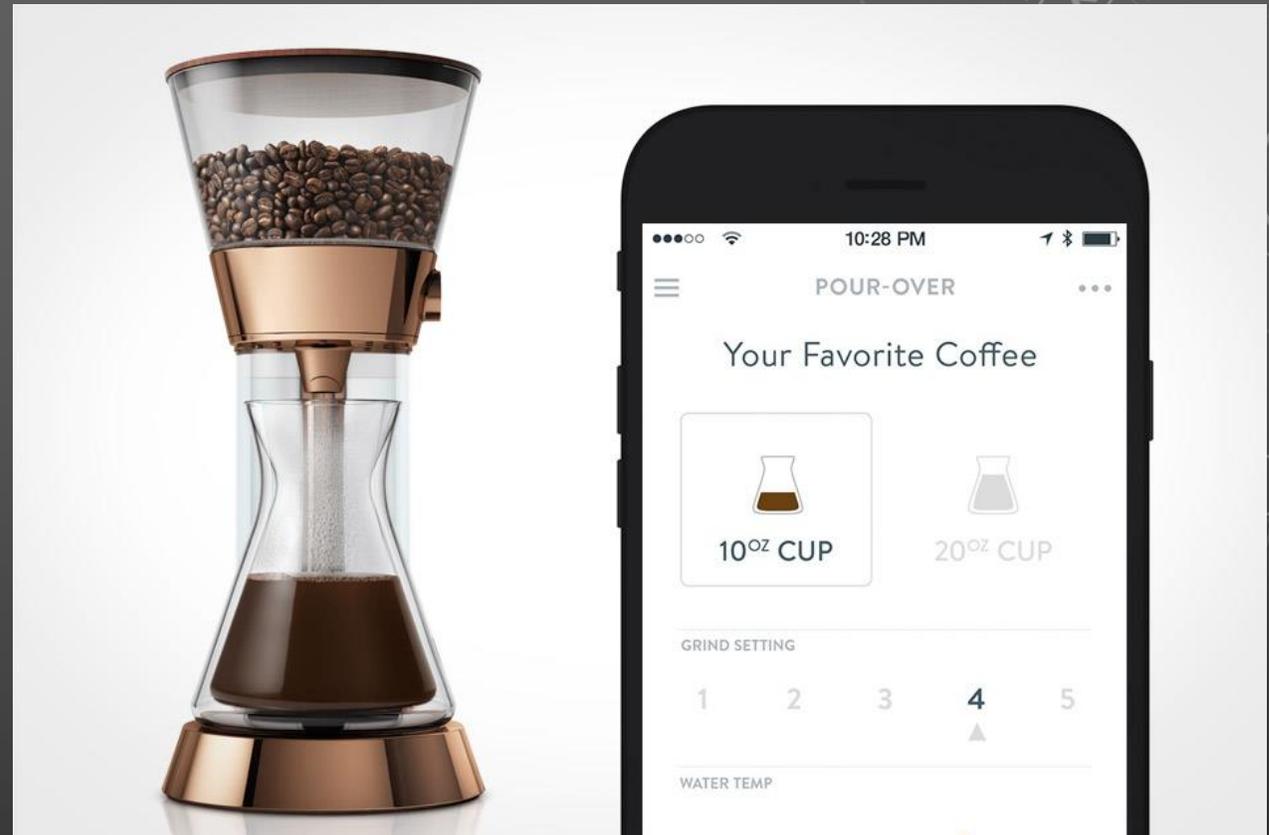

New York-based start-up Quirky has invented a high-tech line of appliances called Poppy, which includes the Poppy Pour-Over. The machine — which features bronze accents — is web connected. This means that it's possible to control the machine from an app on an Android or iPhone. Poppy Pour Over is also the first machine of its kind to offer Amazon Dash Replenishment Service.

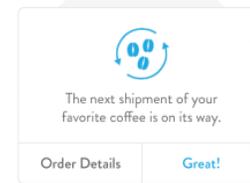

You can schedule your Poppy Pour-Over to make a perfect cup or brew one on demand.

Do you like to share? Post or blog your favorite settings with the pour-over community—all from the Wink app.

Get automatic refills on your favorite coffee beans, water filters, and coffee filters delivered by Amazon via DASH when the machine detects that you're running low.

SMART SENSORS

EFFORTLESS ORDERING

AUTOMATIC DELIVERY

Hopper holds 1 ¼ pounds of coffee beans

Beans are ground directly before brewing for maximum freshness

Water reservoir holds 50 fluid ounces, enough to make 4 single servings

Built-in charcoal filter ensures water quality

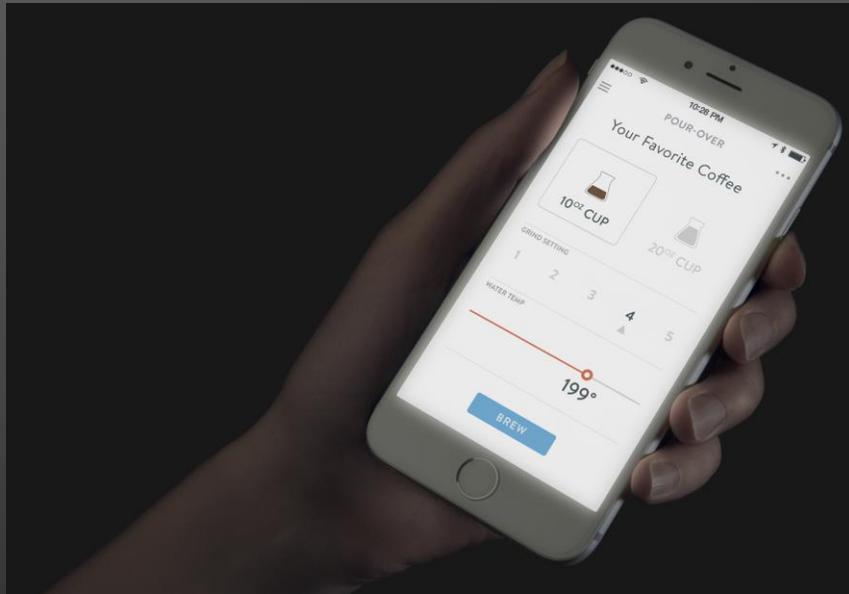

Uses paper coffee filters

Double-walled, grippable glass carafe maintains ideal drinking temperature

Makes single (10-ounce) or double (20-ounce) servings

So if you're a tech-loving individual who averages six cups of joe a day, then you're just like the man who invented Poppy – Pour-Over.

Combine your passions of technology and coffee and keep yourself caffeinated with a single touch.
