

# BABY SLEEP MONITORING

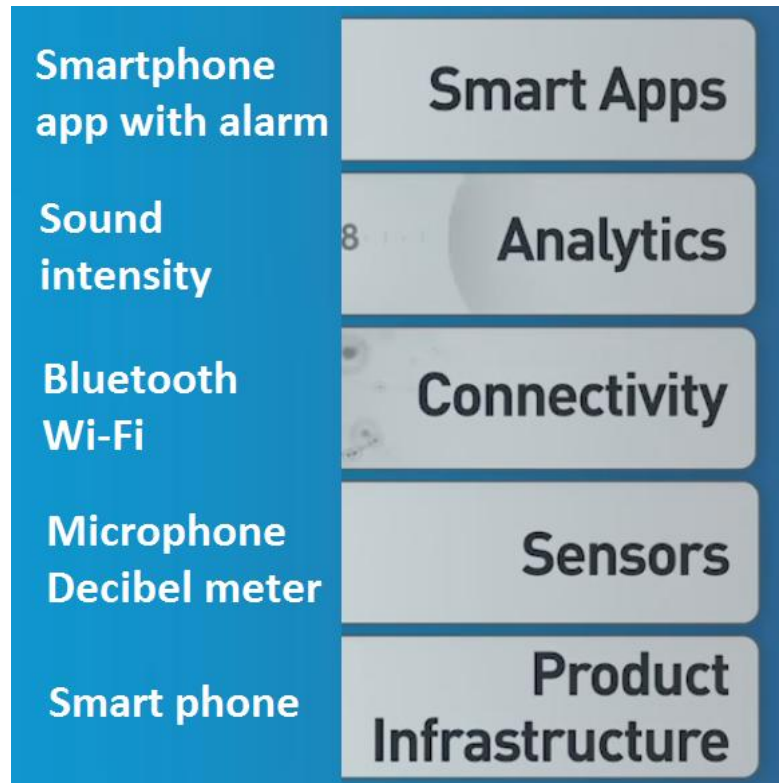

*This product enable to monitor baby sleeping whether they're asleep. The product provides alerts on smart phone if baby is crying.*

**This product helps everyone in the family get more quality sleep.**

This product uses sensor to measure sound level in room and if the sound is high it means that baby is awake and crying.

Sensors send data to smart phone by using Wi-Fi or Bluetooth to smart phone where data are processed. By processing data it can be monitor the lever of sound in room. If sound is higher than defined level it means that baby is crying.

If sound level implies that baby is crying an application installed on smart phone can activate an alarm to parents to notify them that baby is awake and crying.

**Smart connected product stack**

**NOTE:** *On similar way it can be monitor and other phenomena such as baby's temperature, room temperature, activity level.*
